Surveying:
mculler@jewood.org

Testing:
bryce.d@jewood.org

2160 Filbert Hwy
York, SC 29745

What we do:

In 2022 Joel E Wood and Associates added Professional Land Surveying to its scope of services that already included engineering planning and management. It is our goal, with the combination of our civil and geotechnical engineering, surveying, and materials testing expertise, that we can provide our customers with full service, quality, and professional technical support done all in house.

We look forward to working with you on your next project!

Topographical Survey

shows the height, depth, size and location of any manmade or natural features, as well as the changes or contours in elevation throughout the parcel.

Boundary Survey

formally defines and establishes the property lines and property corners of a parcel

As-Built survey

precise measurements of the building and site throughout its construction

House Staking

staking house corners for new builds and additions

Subdivision Survey

splitting a tract of land into smaller parcels
